

TAAP Deliveries is a mobile solution for large or small companies making regular deliveries. Containing electronic proof of delivery (P.O.D) via signature capture, delivery/collection schedules, driver allocation and more.

Electronic proof of delivery - signature capture enables drivers to collect instant proof of delivery which is time and date stamped. This data can be transposed onto electronic delivery notes.

Job status updates - customers can be informed of job status updates through pre-configured messages which can be sent via email or sms. A driver's job status is updated when they log on or off a job.

Benefits

Reduced costs - eliminate paper processing and associated administration costs. Efficiency is increased so delivery capacity or speed of delivery can improve.

Information visibility - recall any job or transaction via a website, and route deliveries from a website to a driver's PDA/handheld device.

Time savings - eliminate time spent processing paper, collecting or returning paperwork, chasing missing information or re-keying data.

Improved customer service - provide clients with updates on the delivery status of their items, and an electronic proof of delivery note containing their signature and a time & date stamp.

Features

Electronic proof of delivery - signature capture ensures that the customer has signed for the delivery, and is validated further by an automatic time and date stamp.

Job status updates - track jobs easily as delivery staff log on or off a job. Updates can also be sent directly to the customer from the system.

Driver allocation - allocate jobs to drivers using a PDA or a website. Drivers can receive jobs and choose to accept or reject them depending on their other commitments.

Instant recall - recall transaction details about any delivery via a website, and send electronic confirmations directly to customers by sms or email. Details saved for 30 days.
