

TAAP Direct Debit validation

data sheet

Direct Debit bank details can be verified immediately with TAAP's validation tool. Available on a PDA/handheld mobile device, the software checks the bank details entered and verifies them, ready for processing.

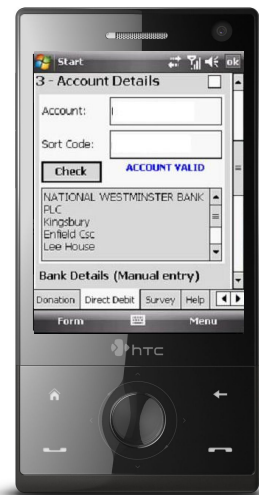

The menu screen contains easy to use functions for entering direct debit details, and taking a signature. All data is subject to 128 bit encryption on the device, plus password protection.

The Direct Debit facility contains the unique originator number which validates the legitimacy of the operator's organisation.

Entering the account holder's name, account number and sort code enables the operator to check the direct debit details are valid, and ready for processing.

If the bank details are verified the software will return with an account valid message and the name and address of the bank below. The operator can then continue with the transaction.

Benefits

-  **Fast and efficient data capture** - no need to re-check information as the data is accurate, and validation is in real-time. Information is securely relayed to either your back-office or a website.
-  **Real-time report information** - team managers can use information captured to monitor operator activity as data is immediately available to view.
-  **Reduced costs.** As there is less paper processing and therefore administration, costs are reduced.
-  **Respond to customers immediately** - customers can immediately be sent a branded and personalised sms or email message whilst the transaction is still fresh in their minds.
