

# TAAP Direct Debit validation

*data sheet*

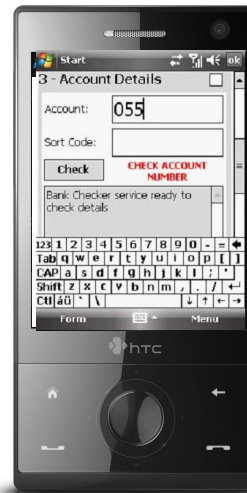

Fundraisers can verify direct debit details on the spot with TAAP's validation tool. Available on a PDA/handheld mobile device, the software checks the bank details entered and verifies them, ready for processing.

The menu screen contains easy to use functions for entering direct debit details, processing Gift Aid, and taking a signature. All data is subject to 128 bit encryption and password protection.

The Direct Debit facility contains the unique originator number which validates the legitimacy of the fundraising person's organisation.

Entering the account holder's name, account number and sort code enables the fundraiser to check the direct debit details are valid, and ready for processing.

If the bank details are verified the software will return with an account valid message and the name and address of the bank below. The fundraiser can then continue with the transaction.

## Benefits

-  **Fast and efficient data capture** - no need to re-check information as the data is accurate, and validation is near real-time. Information is securely relayed to either your back-office or a website.
-  **Near real-time report information** - team managers can use information captured to motivate fundraisers and thus try to increase donor recruitment.
-  **Reduced costs.** As there is less paper processing and therefore administration, costs are reduced.
-  **Respond to donors immediately** - as details are available to act upon straight away, donors can be sent an instant sms or email message whilst the cause is still fresh in their minds.
