

Software for people on the **move**

TAAP Vehicle Inspections

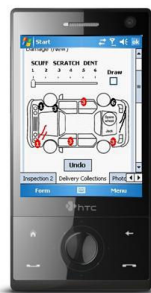

Designed specifically for anyone who inspects vehicles, TAAP Vehicle Inspections is the mobile app for you. The application is available via both a web console and PDA device, with full reporting capabilities.

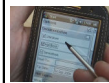

Detailed vehicle inspections can be conducted using the simple but comprehensive tab and menu display. The system supports collection of all data types including annotation on 'flat-fish' diagrams & photos, and signature capture.

Damage levels can be assigned - i.e. scuff, dent, scratch etc., and types of tyre can also be chosen so manufacturer and tread depth are recorded.

Benefits

Reduced costs - eliminate paper processing and associated administration costs.

Information visibility - managers can choose to view pending or completed inspections via a website or PDA, and route inspections from a website or PDA through to an inspector's PDA device.

Improved quality of information due to detailed expandable diagrams and photographic annotation.

Time savings - eliminate time spent processing paper, collecting or returning paperwork, chasing missing information or re-keying data.

Improved customer service - provide clients with immediate detailed inspection reports containing all images and diagrams, plus signature and time stamp data.

Features

Job allocation - allocate jobs to inspectors using a PDA or a website. Roles can be assigned so that managers can view and allocate jobs, whereas inspectors can only see jobs allocated to them.

Built-in postcode look-up - no need to key in the customer's whole address as the postcode look-up tool is built-in to the software application.

Signature capture - ensures that the customer and the inspector have signed the inspection off.

Time & date stamp - the inspector selects 'now' which automatically time-stamps the inspection.

Graphical tools showing detailed diagrams of the vehicle inspected. Each 'panel' of the vehicle can be enlarged for greater visibility and better marking of damaged areas or repairs to be undertaken.

Reports - all information flows from the PDA to a PDF document in minutes so is available as a full inspection report almost immediately. This can be automatically emailed to the client if required.

Inspection process

Roles - the system is role-based for ease of use

Administrator - this role allows the user to set-up new accounts for managers/inspectors and to specify length of time for user access (i.e. monthly, quarterly, annually). Administrators access the application via a website login. An Administrator can also be a manager and vice-versa.

Manager - this role allows the user to create, allocate and view all jobs and job status indicators, as well as all processed jobs. Managers can choose to access the app using a website or a PDA.

Inspector - the inspector role operates directly from the PDA handset, and ensures that the user only sees jobs allocated to them.

TAAP Vehicle Deliveries

Views and reports

Views

Real-time management views are available with the TAAP Vehicle Inspections application via a web console. This enables managers to see:

- quick up-to-date overviews
- detailed inspection views which show the inspection as a PDF/html document on screen containing all information fields such as text, diagrams, and photographs

Reports

Reports can be exported by administrators or managers directly from the TAAP Vehicle Inspections application into Excel or .csv for ease of analysis:

- Export completed or pending jobs - see when and where inspections were undertaken, which customer they were for, the allocated inspector etc.
- Export repair/replacement issues - these will contain a hyperlink to the application so all information including photographic evidence can be viewed in detail.
