

TAAP Touchscreen is an easy to use software application which operates using any type of touchscreen. Ideal for capturing customer data when representatives of the company cannot be present, or for providing information to clients in the form of directories, videos, images etc.

Ideal for use at: events & conferences, exhibitions, shopping centres, in stores, shop windows, council offices, town halls, stadiums and concert halls, leisure centres, reception areas...

The application allows the user to select the settings from the Admin page, which provides access to Event Setup, Offline Data, and the Brand Profile. The application will enter full screen mode when the user prompts it to start.

Brand profiles can be chosen from the admin page - choose from the templates you have pre-loaded so the touchscreen shows a specific profile.

## Features

**Templates** - branded templates can be loaded so that the application has the look and feel you require. Templates can be changed quickly so as long as these are pre-loaded, you can alter the visual impression.

**Offline data saving** - Data is saved to the local data store and then an attempt is made to send data to TAAP. If there is no connection then the data is collected offline until a connection is re-established and all data is uploaded. The application indicates how many pieces of offline data are ready to be uploaded.

## Benefits

**Silverlight 3 allows flexibility with connections** - the system is web-based but does not require an internet connection in order to run because it uses Silverlight 3 technology.

**No need for a representative to be present** - as the technology is simple and can run from any touch screen.

**Fast & efficient data capture** which can be used immediately.
